*Inspired by our Past
Driven by our Future*

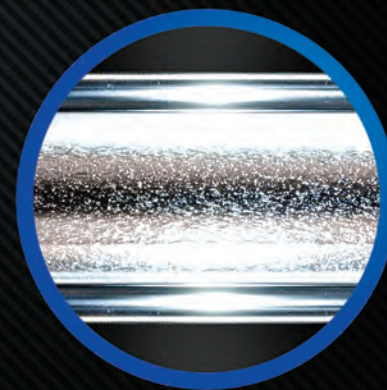

TRIEXTRUSION

Able to extrude multiple materials with various finishes using our state-of-the-art engineering and machinery capabilities.

LED SPECIALISTS

We are highly efficient at extruding thick profile lenses in a variety of finishes putting our capabilities at the forefront of the LED lighting industry.

FROST FINISHING

Our "frost" finishing capabilities allow lighting manufacturers to create new and innovative products unmatched by the competition.

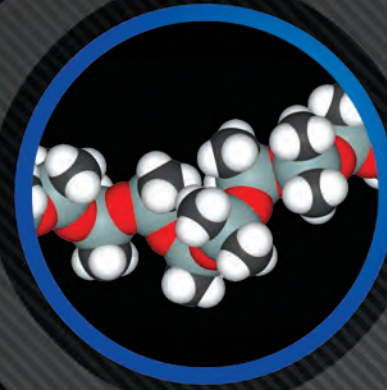

OPTICALLY CLEAR

Extruding & molding truly clear finished products that don't yellow over time providing the ideal lens for any glass-replacement project.

UNEVEN WALLS

Sophisticated extrusion capabilities allows us to successfully produce uneven profile walls to meet the highest standards of lighting design.

ACRYLIC & POLYCARBONATE

Our ability to mold and extrude these raw materials allows us to create true glass-replacement lens molds and extrusions.
